

The general process of Nebulas' on-chain governance

Proposal Period

A project publicly submits a proposal to the community. Once submitted and if the proposal receives enough votes via the NAT on-chain voting, the project will be established;

Develop Period

Once established, the project creator or a community member approved by the creator will execute and complete the project as proposed;

Testing Period

Once the project is completed, the creator submits the final results so the community may review and/or test the project. If approved by the community via NAT on-chain voting, the project will enter the next stage;

NBRE Period

When the project passed the second vote, the Nebulas Technical Committee's will conduct a final review, if the community has no further objection, the project is completed.
